#### WE TAKE RESPONSIBILITY.

With more than 500 exemplary plants worldwide, Sutco<sup>®</sup> RecyclingTechnik GmbH is one of the largest international manufacturers of sorting and treatment plants for waste management. For more than 40 years, the plant manufacturer has been involved in the development of mechanical and biological waste treatment technologies with the central aim of closing material cycles.

40 years' experience

#### WE GET THE BEST OUT.

With our ultra-modern technologies and more than 40 years of recycling knowledge, we let our national and international customers combine economy and sustainability. With our recycling concepts, we get the best out for you.

## Process technology **SUTCO® WENDELIN** THE NEW GENERATION

#### WINDROW COMPOSTING

The WENDELIN windrow turner has been developed for the aerobic treatment of large quantities of organic waste.

Efficient treatment method for biological waste

Throughput of 20.000 to 100.000 Mg/a

The construction kit system allows optimal spatial exploitation

/ww.sutco.com

www.sutco.con

#### **ADVANTAGES**

24/7 operation through innovative plant control

Flexible in use and robust in processing

# SYSTEM

**BIOWASTE COMPOSTING** In biowaste composting, separately collected organic waste is treated.

Fully automated, dynamic rotting process Actively ventilated rotting lines High quality exhaust air treatment

www.sutco.com

www.sutco.com

#### **ADVANTAGES**

Integrated irrigation system for moisture regulation

Separate treatment of different organic wastes possible

# **SUTCO® ROTTING SYSTEMS** LONG-LIVED AND EFFECTIVE WITH THE BIODEGMA® TECHNOLOGY

**OPTIMISED WASTE TREATMENT** 

The BIODEGMA® technology offers robust and long-lived solutions for an optimised aerobic waste treatment process.

Efficient odour reduction through the use of semi-permeable Laminate Gore® cover			
High efficiency through low maintenance and operating costs	S		
Energy-efficient pressure ventilation	V C C		

ww.sutco.com

www.sutco.com

#### **ADVANTAGES**

High availability through nodular design

Safe and simple to handle and operate

Wide application: Waste stabilisation, composting of selectively collected kitchen waste, stabilisation of sewage sludge, biological drying of waste.

# SUTCO® ROTTING SYSTEM WELL THOUGHT OUT

#### TUNNEL COMPOSTING WITH ROTTING SYSTEMS BY SUTCO®

In tunnel windrows, the rotted material is spread between reinforced steel walls after it has been shredded and sieved by mechanical treatment.

Flexible through separately enclosed units

Emissions are effectively held back

Automatic input system for rapid filling

www.sutco.com

www.sutco.con

#### **ADVANTAGES**

Optimum process control until discharge to the secondary rotting system Minimum staffing requirements

# SUTCO® BIOPV HIGHLY EFFICIENT SOLUTIONS

#### **HIGH PROCESSING CAPACITY**

BIOPV (Biowaste press water fermentation) is a process that markedly improves the energy balance and processing capacity of composting plants.

Separation of organic components for biogas generation

Low technical expenditure

Maximum gas derived from the compressed liquid phase

www.sutco.com

www.sutco.com

#### ADVANTAGES

Highly efficient fermentation in biofilm fermenters

Efficient energy exploitation based on the excellent use of space and time

WENDELIN Page 04	BIOFIX Page 06	BIODEGMA® Page 08	TUNNEL Page 10	BIOPV
Suitable for a wide range of organic wastes	Suitable for all types of organic waste	Suitable for all types of organic waste	Suitable for all types of organic waste	Waste to Energy
High performance techno- logy for large throughputs	Medium and high throughput capacities	Modular design with high flexibility in design capacities	Modular design with high flexibility in design capacities	Low specific investment
Completely closed system with maximum emission control	Fully closed system with maximum emission control	High flexibility to meet different legal and economic framework conditions	Completely closed system with high emission control	High space load
Dynamic process for best decomposition results	Dynamic process for best stabilisation results/ product qualities	Low investment costs		Gas yield with hi CH4 content
High area efficiency	High area efficiency	Static process with low operating costs	Static process with low operating costs	Easy maintenanc
Fully automated process	Fully automated process: automatic loading and un- loading, watering, aeration and turning	Low energy consumption, low maintenance costs		High flexibility in throughput
